pterosaurs (Hone & Benton, 2007)] (Calypte helenae) to the 100 kg ostrich (Struthio camelus), a more than 50 000-fold weight difference However, mass distribution across living Aves is severely right-skewed, even on a logarithmic scale - the median

Origins - Project MUSE

More than 100 species of pterosaurs have been described, but for all their variety, they shared the fate of their reptilian cousins; by the close of Cretaceous times, they were gone Why they should have become extinct when birds prospered and expanded in numbers is not yet clear One of the surprising and most remarkable developments of the last

HOBET.Testking.HOBET.v2015-03-20.by.Gladys

100% valid, I didn't fail any question, all of them are in this VCE Still valid All questions are different than any vce It can be inferred from the passage that which of the following is characteristic of the pterosaurs? A They were unable to fold their wings when not in use B They hung upside down from branches as bats do before flight

Respiratory adaptations in birds and bats

Hummingbirds typically do so more than 100 times per day (Krebs and Harvey, 1986) Each bout lasts for less than a minute, with 20% of the daylight hours being spent foraging (Diamond et al, 1986) The flight aerobic capacities of the small hummingbirds appear to constitute the upper limit of

Taking Wing: Archaeopteryx and the Evolution of Bird Flight

Archaeopteryx was 100% bird that could fly and was not a transitional form Previously, he had to build his case on the existence of Archaeopteryx ' furcula to show it could fly
